

DAF CONNECT

More uptime
More insights
More efficiency

DAF Connect

The world is becoming ever smaller. Connectivity allows us to work more quickly, easily and effectively. The possibilities are endless. DAF Trucks believes that connectivity is also the key to even more efficient logistics solutions. That's why we developed DAF Connect!

DAF Connect allows you to monitor your fleet's performance, whenever you want, wherever you want. With this intelligent, user-friendly platform you stay in control of your logistics processes — and get the best out of your people and vehicles. By providing you with up-to-date information about your drivers, trucks and logistics, DAF Connect helps you increase vehicle uptime, improve insight, enhance logistical efficiency and reduce operational costs.

Here at DAF Trucks, we continuously provide solutions that help you improve your profitability. We offer sophisticated transport solutions, pioneering technologies, a dedicated international dealer organisation and a wide range of services.

DAF Connect is one of those solutions. It's now available for all new vehicles, or as a retrofit kit for your current fleet. No matter what you transport or where you travel in Europe, this flexible fleet management platform will guide you to increased profitability.

More uptime, insights and efficiency

With the DAF Connect platform, you can see all of the information you need, in real time. Each time you log into the special DAF Connect Portal, you have immediate access to the very latest data about how your driver is driving, your vehicle's status and its exact location.

More uptime

Your DAF Dealer can use DAF Connect to give you even better and more timely advice — not just about purchasing new trucks, but also about maintenance and repairs. Based on the information provided by DAF Connect, maintenance can be tailored even more precisely to your specific fleet and business model. Using the Vehicle Health information, the DAF Connect Portal displays the warnings the driver sees. Your dealer proactively supports you by scheduling and carrying out maintenance and repairs at the correct times, helping to further optimise the availability of your fleet. In the short term, you minimise the chance of faults and breakdowns. In the long term, you save costs.

With the introduction of our New Generation DAF trucks, we also offer connected navigation. This is truck-specific and provides the driver with real-time traffic information, over-the-air map updates or push routes via the DAF Connect Portal. DAF Connect also maps the current location of your vehicles, giving you insight into performance and the routes being covered. This helps you optimise productivity and raise safety standards for your fleet and drivers. For added peace of mind you can even choose to receive alerts for individual vehicles and drivers.

More insights

You can also compare individual driver behaviour using the ECO Score Report. It gives each driver a score based on their anticipation and braking scores, which are

displayed in the truck and on the mobile app. This app enables drivers to follow their driving behaviour over time. It also makes it possible for drivers to compete with one another in a drivers' league to optimise performance.

In addition, the platform provides real-time alerts in the event of a predetermined event related to the driver or vehicle. Examples include deviations in speed, route, location and fuel consumption.

DAF Connect also gives you clear information about how your fleet capacity is being utilised, so you can optimise fuel consumption and returns per kilometre.

More efficiency

Having direct access to the right information means you can provide guidance at any time. For example, you can use DAF Connect to compare the performance of individual drivers on the same route. This may show, for example, that individual driving behaviour is not efficient across the board, which can have a significant impact on your profitability. With the ECO Score Report, DAF Connect makes it easy for you to monitor an individual's driving behaviour. You can then offer DAF Eco Drive training to improve performance.

DAF Connect offers an Open Platform, meaning you can share your truck data with your existing fleet management system. The result is one source of data via one channel, which enhances your efficiency.

DAF Connect Portal

The DAF Connect platform is designed to increase vehicle availability, reduce operational costs, improve logistical efficiency and maximise flexibility. So when you access the DAF Connect Portal it directly displays the information that's important for your business, regardless of the size of your fleet.

Dashboard

DAF Connect collects real-time information and presents it online in a clear, user-friendly dashboard. Fuel Reports, ECO Score Report, Alerts, Vehicle Health and Fuel Level Deviation are shown by default. But you can customise the dashboard to show the modules that are important to you. Your DAF Dealer will be happy to advise you about the additional options available to suit your specific requirements.

Fuel Reports

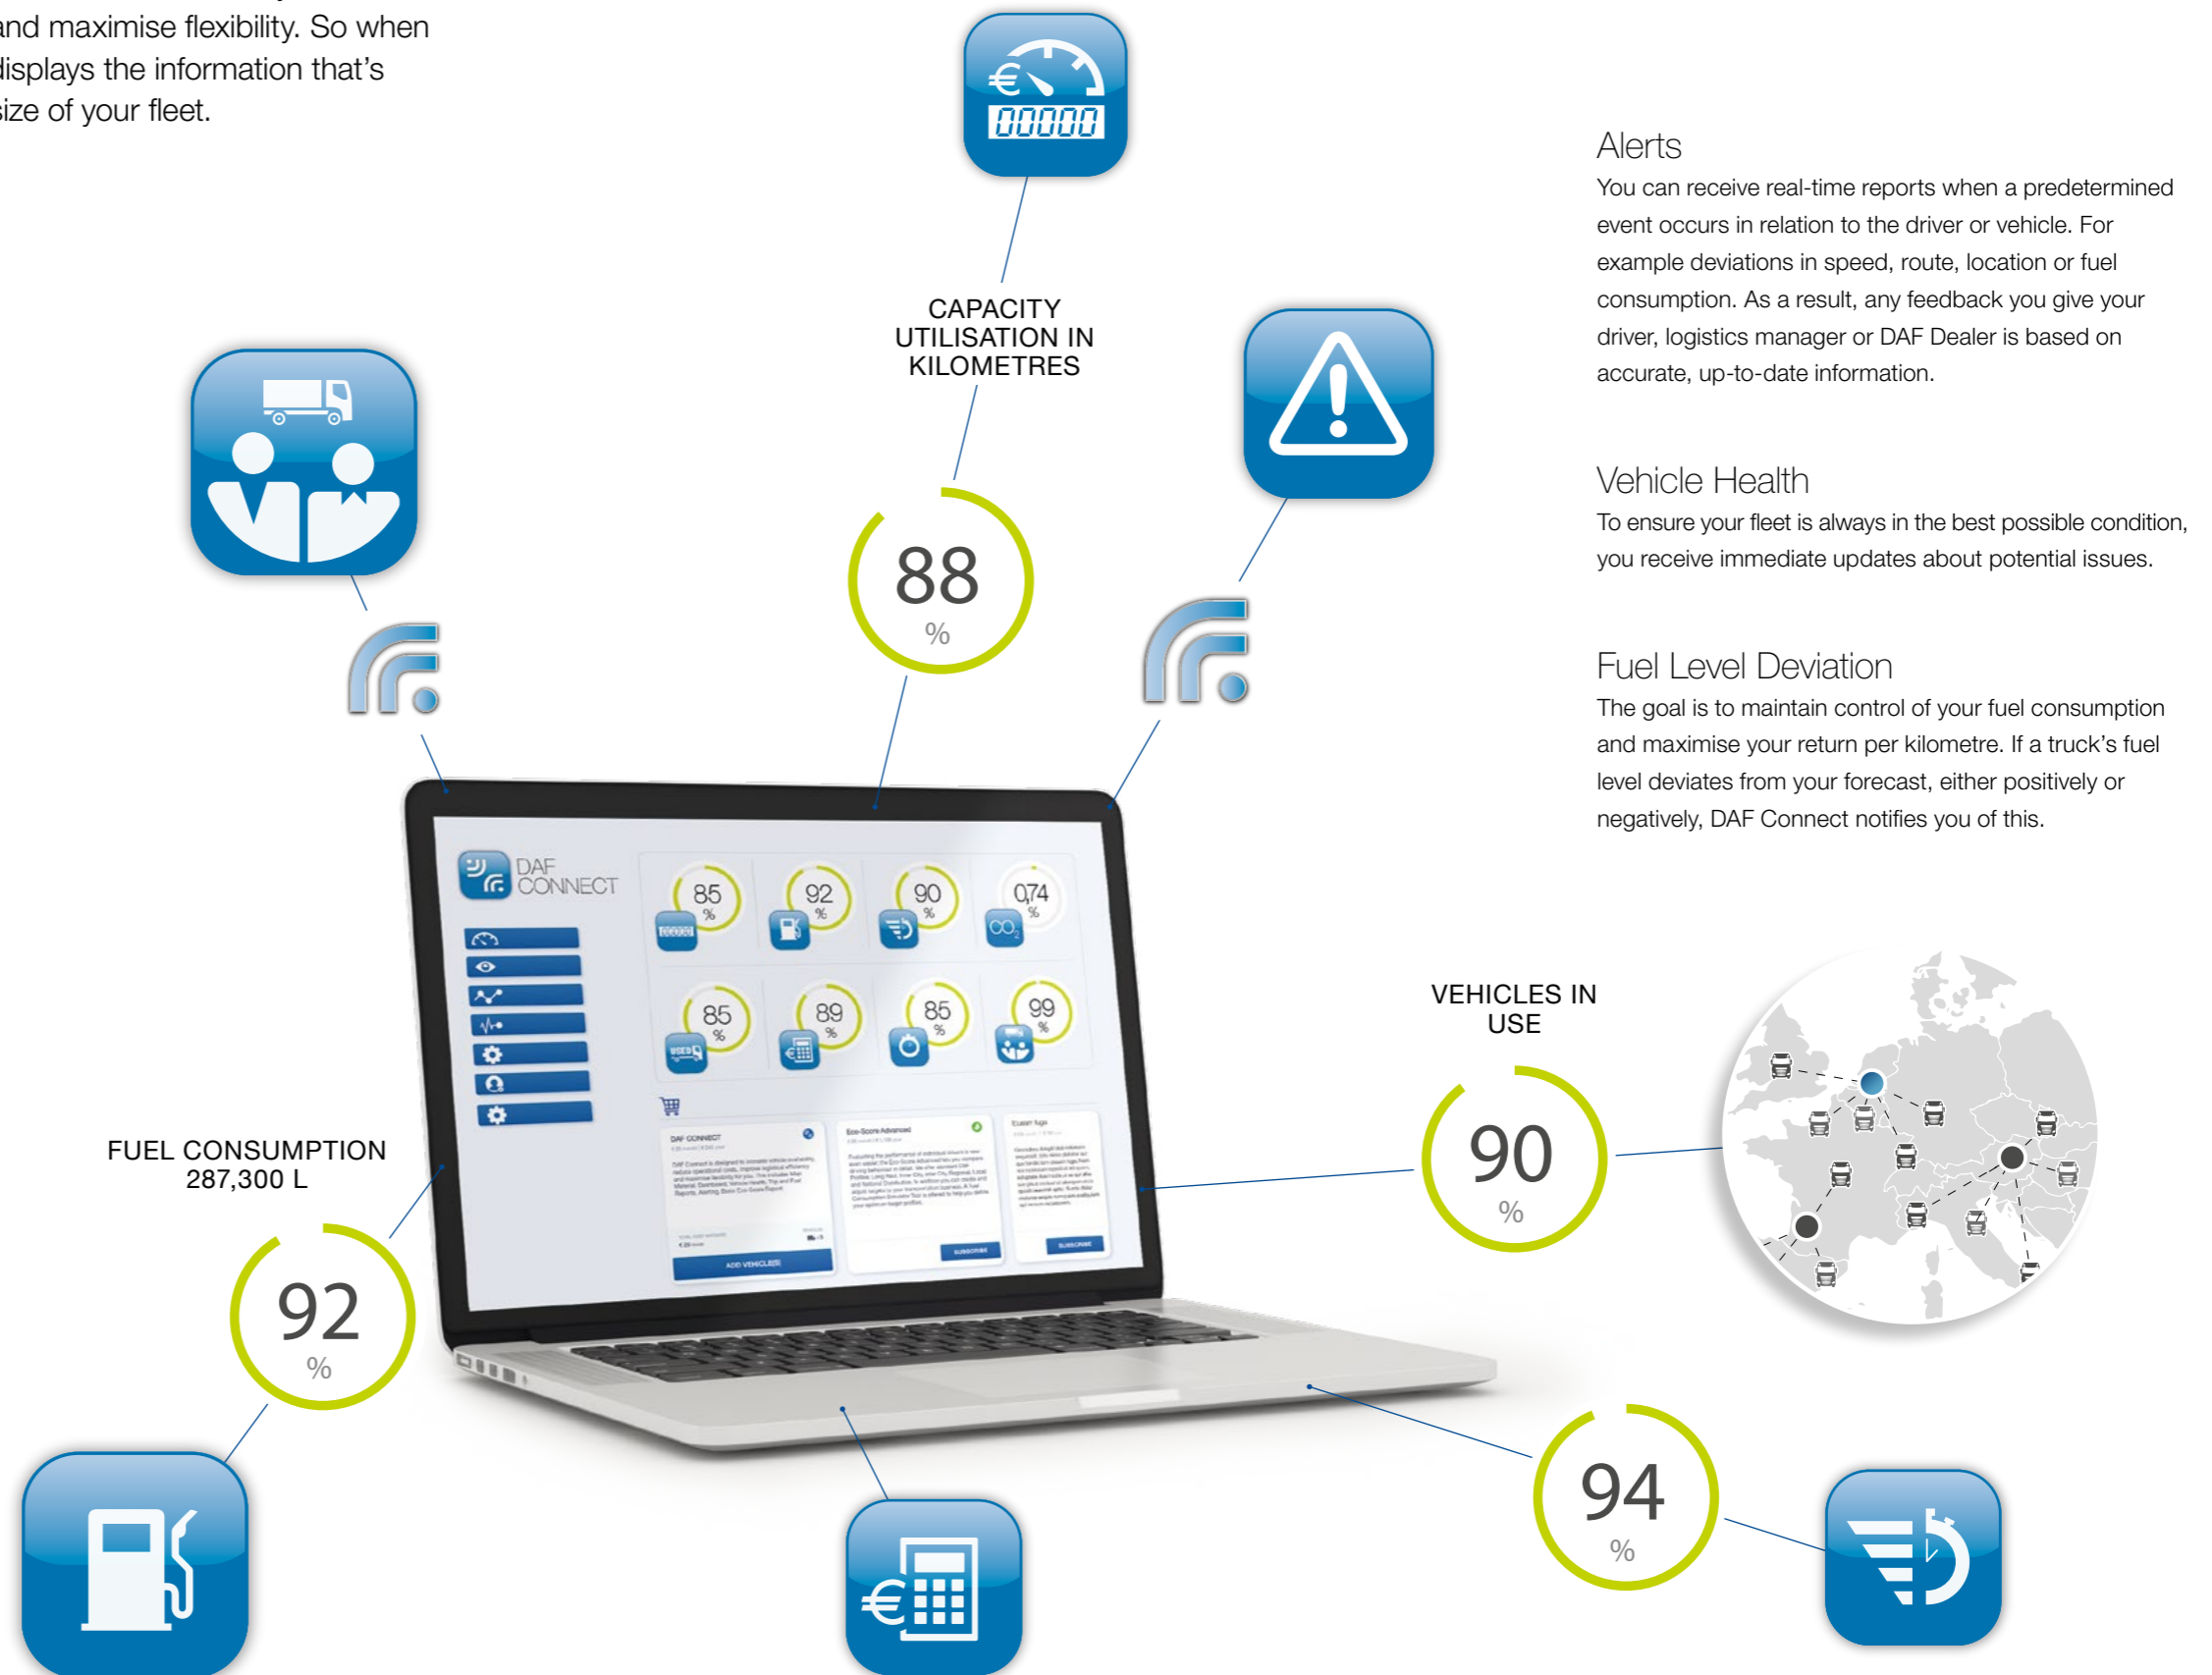

The Driver Report and Vehicle Report modules give you a continuous overview of how the driver is driving and your truck's fuel consumption. You can fully configure these reports to suit your needs. If you use the interactive Driver Performance Assistant (DPA) in one or more vehicles, you can also view these scores at any time, compare them against each other and offer direct guidance if necessary.

Mobile App

Your drivers can also monitor their performance. With the DAF Connect Truck App, they can see their ECO Score, get tips and tricks, and exchange messages with fellow drivers to compare scores.

ECO Score Report

Evaluating individual driver performance is now even easier. The ECO Score Report lets you compare driving behaviour in detail and monitor targets. Fuel consumption along with anticipation and braking behaviour are continuously monitored and used to score your driver. You can either compare this score with other drivers or an operational target. You can also use scores to help keep drivers more motivated and self-aware on the road, and optimise profitability as a result.

Alerts

You can receive real-time reports when a predetermined event occurs in relation to the driver or vehicle. For example deviations in speed, route, location or fuel consumption. As a result, any feedback you give your driver, logistics manager or DAF Dealer is based on accurate, up-to-date information.

Vehicle Health

To ensure your fleet is always in the best possible condition, you receive immediate updates about potential issues.

Fuel Level Deviation

The goal is to maintain control of your fuel consumption and maximise your return per kilometre. If a truck's fuel level deviates from your forecast, either positively or negatively, DAF Connect notifies you of this.

Open Platform

DAF Connect's Open Platform has been designed to truly live up to its name. Your own fleet supplies the relevant data via a central database, so you can seamlessly integrate DAF Connect into your existing fleet management solutions. The data is available in the rFMS standard. This ACEA industry standard makes it straightforward to share data with existing applications in a fixed format. As a result, the Open Platform is also suitable for a mixed fleet — good news if you have invested in fleet management systems but still want to use the manufacturer's data. This delivers a unique level of flexibility: we pull out all the stops to help you achieve the highest return per kilometre. And by adding the portable DAF Connect Tablet, it's possible to use mobile third-party apps in and around the truck.

Remote Tacho Download

Remote Tacho Download offers three solutions in one: a single tool for downloading, storage and analysis. Maintaining an accurate record of driver cards and the tachograph's memory is very labour-intensive and prone to error. You can end up paying thousands of euros for each instance of inaccurate bookkeeping. DAF Connect's new Remote Tacho Download function ensures automated reading and storage of tacho information. You can also continuously monitor your trucks and drivers to ensure they are complying with driving and rest period guidelines and intervene where necessary. This gives you more control, reduces the risk of fines, and brings you greater peace of mind regarding road safety.

Customisation for everyone

The DAF Connect platform stands out on the market for several reasons.

Firstly, it's very user-friendly — alerts are based on vehicle or driver behaviour, so you're always aware of any deviations. Each key cycle is a separate trip, making it easy to compare trips. What's more, the DAF Connect Portal makes it easy to create a geofence over an unlimited number of points, so you can define borders between countries in no time. This is a useful tool if vehicles are in defined areas or have just left them.

DAF Connect includes a comprehensive range of features as standard. You get 36 months access to the DAF Connect Portal, which has several modules to get you started straight away. You can decide for yourself which other features are useful and your DAF Dealer can offer excellent advice. You can also purchase additional features via the DAF Connect Webshop, these include contract extensions after 36 months, data packages for the Open Platform and the Eco Score Advanced.

DAF Connect Tablet

The DAF Connect Tablet makes it possible to integrate a third-party solution with the truck via a mobile app. In addition, the tablet hosts the Connected Navigation feature, which is displayed in the DAF Infotainment system on the dashboard.

The DAF Connect Tablet is portable so it can be used in and around the truck for maximum flexibility.

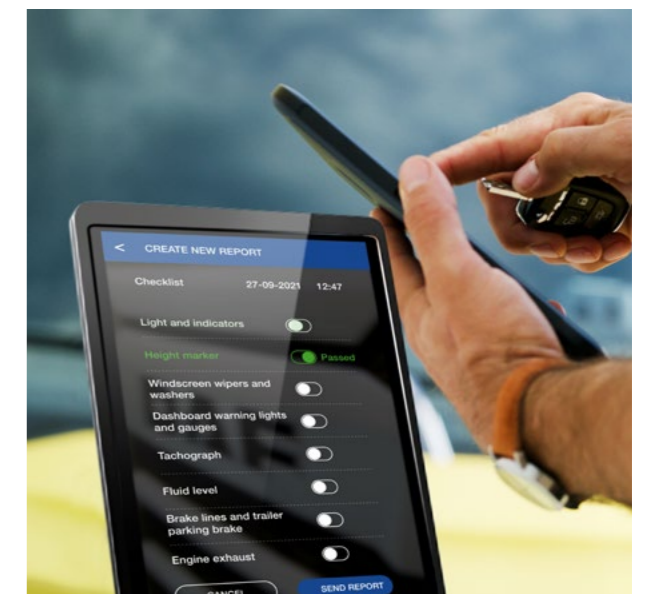

Connected Navigation offers truck-specific features making it possible to use the truck model, cargo type and truck dimensions while navigating to your destinations. And with the fastest route calculations in the industry, Real Time Traffic allows the driver to take the most efficient route when congestion arises.

You can also download apps from the DAF Connect App Store onto the DAF Connect Tablet. This makes it possible to use third-party apps for fleet management, parking, washing, traffic and more.

DAF Connect Truck App

The DAF Connect Mobile App brings our platform to the driver. It offers:

- Individual Driver Score - Based on trucks driven
- Walk Around Check - A daily check of the truck for possible damage or repairs
- Messaging - Send and receive messages via the DAF Connect Portal
- Call ITS – Places a call to ITS directly
- Driver Leagues - Compare driver scores within the company or with other companies
